Time is Running Out!
For this patient... and for Legislative Action
The U.S. Congress can stop that from happening.

For many Medicare beneficiaries, IVIG isn’t readily available.
• 40+% of providers aren’t paid enough to cover their costs of purchasing the product
• Patients are being sent to the hospital for infusions, risking exposure to infections
• Some physicians have stopped providing IVIG infusions to Medicare beneficiaries*

We Urge All Representatives to Act Now
Cosponsor H.R. 2914 - Act to Improve Medicare IVIG Access in any Medicare Legislative Package

Supported by Patients and Physicians
Immune Deficiency Foundation (IDF)
Clinical Immunology Society (CIS)
Jeffrey Modell Foundation (JMF)
GBS/CIDP Foundation International
Platelet Disorder Support Association (PDSA)
National Patient Advocate Foundation

This patient has a genetic disorder that causes an impaired immune system. For him, the difference between being very sick and being healthy and productive is an infusion called IVIG (intravenous immunoglobulin). Without it, he may even die.

IVIG is the only viable treatment for him and for many other patients living with primary immunodeficiency diseases, as well as a number of neurological, autoimmune, and other chronic conditions and illnesses.

Without proper reimbursement, IVIG isn’t available.
